Personal Statement

Self-motivated and ambitious software developer with a strong foundation in Computer Science, developed through both academic study and real-world industry experience running my own software companies. I have successfully designed, built, and deployed software solutions that reached real customers, demonstrating both my technical expertise and my ability to deliver value in fast-paced environments. I am now focused on applying this blend of technical ability, creativity, and practical experience to contribute to meaningful software projects within a professional team.

Education

University of Swansea

2021 — 2024

Graduate

BSC Computer Science (1st Class)

Graduated with First-Class Honours (78% average). My final-year project explored real-world applications of blockchain technology, focusing on the ERC-6551 token standard on the Ethereum blockchain.

Beauchamp College

2017 — 2020

A* in Economics, A in Maths, C in Physics, Twelve GCSE's

Work Experience

Panda Robotics LTD

2020-2022

Founder

Leicester, UK

Founder and lead developer of a SaaS based company specialising in the automation of purchasing within the high end clothing and collectables industry.

Built an application with a Python backend, featuring multithreading, user data handling and advanced request based code. Developed a frontend using PyQt5 and collaborated with designers to produce a modern and slick look.

Implemented industry standards such as GitHub for version control and produced comprehensive developer and user documentation, along with structured support ticketing for bug reports.

Ran all social media accounts, marketing, sales and accounting for this business giving me experience in the full lifecycle of a software application from planning, creation, maintenance and sales.

Higashiyama Niseko Village, a Ritz Carlton Reserve

2024

Front Office Staff

Niseko Village, Hokkaido, Japan

Worked for one month at one of the world's most prestigious hotels, where I gained first-hand experience in omotenashi (Japanese hospitality). Gained valuable insights into working with wealthy international clients and developed strong cross-cultural communication skills by assisting guests from diverse backgrounds and languages.

Nikko Style Hanazono

2024-2025

F&B Service Staff

Niseko Hanazono, Hokkaido, Japan

Further immersed myself in Japanese culture and strengthened my adaptability in a professional Japanese environment. Joined during the pre-opening phase of this brand-new hotel, contributing as part of the initial core team in a fast-paced, startup-like environment.

Projects and Proficiencies

Working Holiday Work Platform (workingholidaywork.com)

2025

Full-Stack Web Application

React, TypeScript, AWS

Developed a comprehensive job platform for working holiday opportunities across Japan, Australia, and New Zealand. Built React 19 frontend with TypeScript and Material-UI featuring interactive 3D globe and map integration. Implemented complete AWS serverless backend with 19 Lambda functions and DynamoDB database design. Integrated AWS Cognito authentication with enterprise security including JWT validation and rate limiting. Features include user profiles, job applications, saved jobs, email notifications via AWS SES, and admin moderation.

AI Content Automation Platform

2024

Content Generation

Python, Computer Vision, NLP

Built comprehensive automated video content pipeline using Pika Labs API for AI video generation from text prompts. Integrated ElevenLabs voice synthesis with automated audio splitting and synchronization for multi-segment content. Implemented YOLO object detection for intelligent video reframing from landscape to portrait format for social media. Developed custom subtitle generation system using OpenAI Whisper with word-level timestamps and advanced ASS styling. Created automated content assembly pipeline combining video, audio, subtitles and background music using FFmpeg.

Social Media Web Application

2024

Full-Stack Development

Laravel, PHP

Designed and developed full-featured web application using Laravel PHP framework. Implemented user authentication, post and comment functionality, and real-time notifications. Integrated Google APIs using custom-built Service Container following MVC architecture. Demonstrated advanced database management using migrations, factories, and seeders.

Restaurant Review Mobile App

2024

Android Development

Kotlin, Firebase, Google APIs

Developed Android application in Kotlin using Android Studio for restaurant reviews. Used Firebase for data storage including review data and image management. Integrated Google APIs for location logging and distance calculations to restaurants.

Digital Asset Price Monitoring Tool

2022

Trading Software

Python, Web APIs

Built monitoring software for digital asset price tracking using Python with web scraping to detect discounted prices on art collections. Implemented multithreading for performance optimization and successfully tested and sold access to the monitoring platform.

Blockchain Profit Calculator

2022

Trading Tool

Python, Blockchain APIs

Built tool to calculate profits on digital asset marketplace. Used asynchronous processing to drastically improve performance, letting users process thousands of transactions in seconds. Applied blockchain technology expertise to create practical solution for users to easily track their investments.

Technical Proficiencies: Python, Java, Haskell, Prolog, Spark ADA, HTML/CSS, PHP, SQL, Kotlin, React, TypeScript, AWS, Laravel, Firebase
